Internships and projects

Jan - Dec 2023: Data Analyst with **IA4U** in **ESB ESPRIT SCHOOL OF BUSINESS, Tunis**

The IA4U research unit at ESB is a collection of people who are passionate about artificial intelligence AI and who decided to get together and create a group to be able to help each other and develop sites/applications with AI that will facilitate the life of students within the ESB.

Missions:

- The implementation of a solution to help students who are looking for an educational path that is adequate to their future ambitions by setting up a system of educational path recommendation using AI
- developing a website using react.js for the framework …
- Node.js and Express.js were used for the backend
- integrating Flask
- using mysql as a database

key words: react.js, node.js, express.js , F l a s k , m y s q l , a r t i f i c i a l i n t e l l i g e n c e , S C R U M

July 2022: Data Analyst in **ESB ESPRIT SCHOOL OF BUSINESS, Tunis**

ESB (Esprit School of Business) is a business school. It is part of the Groupe of the education (ESPRIT), which is a private higher education institution in Tunisia. Private School of Engineering and the IT

Missions :

• The implementation of a solution to support the Decision to Analyze Data on a Facebook page and predict future interactions of users with Facebook posts.:

- extracting data through Facebook
- clean the extracted data to remove any irrelevant information or noise.
- perform sentiment analysis on the text content of the posts to determine the overall sentiment (positive, negative, neutral).
- use pre-trained models or train your own sentiment analysis model using historical data.
- utilize machine learning algorithms to build predictive models that forecast future interactions with Facebook posts.
- features such as post content, sentiment, time of posting, and historical engagement metrics can be used as input variables for the models.
- evaluate the performance of the predictive models using appropriate metrics such as accuracy, precision, recall, F1-score, etc.
- validate the models using cross-validation techniques to ensure their generalization to unseen data.
- integrate the predictive models into your existing system or workflow.
- automate the data collection, pre-processing, and prediction processes to enable real-time or periodic updates.
- deploy the solution to a production environment where it can be used to make informed decisions about Facebook post analysis and engagement prediction.

November 2021: Data Analyst in **ESB ESPRIT SCHOOL OF BUSINESS, Tunis**

ESB (Esprit School of Business) is a business school. It is part of the Groupe of the Private School of Engineering and the IT education (ESPRIT), which is a private higher education institution in Tunisia. **Missions:**

- download the dataset from Kaggle. Ensure it includes information on flight delays in the United States up to 2015.
- remove irrelevant or redundant information from the dataset. Handle missing values appropriately.

Standardize formats for consistency.

- explore the dataset to identify relevant variables related to flight delays. This might include departure delay, arrival delay, flight date, airline, origin, and destination.
- create a table structure with appropriate columns to represent the analysed data. This table will serve as the framework to organize the flight delay information.
- populate the table with data from the cleaned dataset. Each row in the table should represent a specific flight, with columns corresponding to the variables identified during the analysis step.

Keywords: Talend , power BI , Tableau, Mysql

February, July 2014: Developer in **W3S CONSULTING , Rennes ,France**

W3S Consulting is a consulting firm based in Rennes, France, specializing in providing services related to IT, digital transformation, and software development. They likely offer a range of services including IT strategy consulting, software development, project management, and IT infrastructure solutions to businesses in various industries.

Missions:

- developing a student traceability application with five modules (Social Networks, Electronic Document Management, Curriculum Vitae, Administration, and Institution) using Zend Framework 2
- clearly define the features and functionalities of each module based on the requirements.
- identify the target users and their needs.
- plan the database structure and relationships to support the application's data requirements.
- install Zend Framework 2 and set up your development environment.
- configure the project structure and necessary dependencies.
  - Social networks module:
- implement features for connecting students via social networks.
- integrate APIs for popular social media platforms if necessary.
  - electronic document management module:
- develop functionalities for uploading, storing, and managing electronic documents related to students' activities.
- implement access controls and permissions for document management.
  - curriculum vitae module:
- design forms for students to input their CV information.
- develop functionalities for storing and managing CVs.
  - administration module:
- implement features for managing user accounts, roles, and permissions.
- develop an interface for administrators to monitor and manage the application.
- institution module:
- implement features related to managing institution
- -specific data such as courses, departments, and academic calendars.
- develop functionalities for administrators to configure and update institution-related information.
  - integration and testing:
- integrate the modules together to ensure seamless functionality.
- conduct thorough testing to identify and fix any bugs or issues.
- Perform usability testing to ensure the application meets user needs and is intuitive to use.
  - User interface design:
- design a user-friendly interface for each module following best practices for UX/UI design. Ensure consistency in design across modules for a cohesive user experience.

Keywords: Zend Framework 2

Skills and Certifications:

- ETL and Data visualization software : Talend, Tableau , Power BI
- IDE and Platforms: Anaconda , collab , R studio, Microsoft Visual Studio
- Development : C++ , PL/SQL , Python , R
- Framework and technologies : Zend Framework , .NET
- Database : SQL Server, MYSQL , Oracle
- Methodologies : SCRUM, GANTT
- Certification :
  - **Data Science Orientation**
  - **Python for Data Science and AI**
  - **Chatbots GenAI : Créer et déployer des Chatbots alimentés par Open**
  - **Introduction à l'analyse des données**
  - **Projet Python pour la science des données**
  - **TOEIC (Test of English for International Communication)**

School Curriculum:

- 2021- 2023-Master's Degree in Business Analytics in Esprit School of Business
- 2014- Software engineering degree in Polytechnic Central Private Institute
- 2011 - Bachelor's degree in IT Management in Higher Institute of Management
- 2008 - Experimental Science Baccalaureate

Languages :

- English : Excellent level
- Arabic: mother-tongue
- French : Fluent

Extracurricular activities:

Literature, Music, Painting, Travel
